TYPICAL IMPROVEMENTS FOR THE PROPOSED DDA DISTRICT

One of the main objectives of the proposed Downtown Development Authority is to insure that areas within the proposed district boundary are distinguishable from other portions of the city. The Downtown Development Authority has planned for several enhancements throughout the proposed district.

The Downtown Development Authority would like to design and install decorative street signs unique to the Downtown Development Authority District. These street signs would not only be installed in the proposed portions of the district, but in the existing areas as well. Other enhancements include the installation of new handicap accessible sidewalk ramps at each intersection in the new district. These new ramps are to be constructed using traditional brick pavers. The pavers would be similar to those being used throughout the existing Downtown Development Authority District. The Downtown Development Authority is also planning to install decorative street lighting throughout the expanded district.
Proposals and Estimated Time of Completion for Each Demolition, Repair and Alteration Proposed Under the Amended Plan
